

Codeless Site Extension/Configuration

Note: 1. Here word Bajaj is used as placeholder and not indicate/point name of the company

2. Its sample codeless configuration assuming different requirement from industry and not related any specific industry

1. Create a below subtype of Item for achieving business value

- a. Categorizing business data to understand and store in database
- b. Different rule for (item_id, item_name etc)
- c. Default workflow/project association
- d. Different custom properties on IM & IRM forms

Item

->Bajaj_Part (Bajaj_Part_Code & Bajaj_Part_Revision_Code as a property attached to object)

-> Bajaj_Part_Ass

->Bajaj_Part_Cust

->Bajaj_Part_Eng

->Bajaj_Part_Logtc

->Bajaj_Part_Manuf

->Bajaj_Part_Toolg

2. Create a descriptor Bajaj_Part_Code on Bajaj_Part which will be presented to user while creating Bajaj_Part at the same time will be inherited to all other subtypes created above

3. Change Item Master Form having below properties which will be inherited for all other subtype

IMF:

Unique_Code

Description Language

Description (String 200)

ItemID Control

PartType

ProductionIndicator

IRMF:

ControlClassification

PartKeyword

MaterialGroup

MaterialType

PlantList

ProdPart

PartUOM

Sourcing Channel

4. Organization wants a one more form named as “assembly form” for Bajaj_Part_Ass

- Create an “AssemblyForm”

- Attached this form on post action while creating “Bajaj_Part_Ass” Item

5. Add various required LOV’s to properties on IM/IRM form

6. Add LOV to property Bajaj_Part_Code on ItemType BajajPART

7. Create cascading LOV for MaterialGroup

8. Create a naming rule for all ItemType as

- Bajaj_Part – “BP”NNNNN

- > Bajaj_Part_Ass – “BPA”NNNNN

- >Bajaj_Part_Cust -“BPC”NNNNN

- >Bajaj_Part_Eng- “BPE”NNNNN

- >Bajaj_Part_Logtc –“LOG”NNNNN

- >Bajaj_Part_Manuf- “BM”NNNNN

- >Bajaj_Part_Toolg-“BPT”NNNNN

9. Create a RevisionID rule

10. Create a package file for deployment

11. Deploy the same to TC Site

12. Verify all the data model extension by logging to TC Rich Client

Correct the template for above configuration issue

13. In the above while attaching naming rule to “Bajaj_Part_Ass” user has selected condition “is false” which causes the new naming rule define for subtype Bajaj_Part_Ass was not taking the effect

- To correct this user has to change the condition to “isTrue”

- To achieve above user has to detach first naming rule attached to top level item “**Bajaj_Part**”

14. Revision ID should be starting with “A” and not “-“and also has to skip B, E, G, I

- To achieve this user has to append LOV

- Replace “-“with A

15. Create Package for template and update database for these changes and verify

=====

Add more configurations to Bajaj Site

1. Naming rule for MSWord Dataset Name having context name as ENG and MFG
 - Create a context LOV for values ENG and MFG
 - Create a naming rule pattern using LOV
 - Attached it to MSWord business object property called "name"
2. Add two more properties i.e. **ModelType** and **Make** to **Bajaj_Part_Logtc** so that when user select a ModelType related Make should be presented to user
 - ModelType (user will select a value from pick list)
 - Make (User will select a value from pick list)

Administrator has to create interdependent LOV for achieving above requirement

Say ModelType LOV contents = CT100, Pulsor, NXG

Company from which the component will be purchased is depend on ModelType

CT100 = LT, GRINDMaster, SUZUKI

Pulsor= LT, TVS, BEHR

NXG= BOSCH, HERO MOTORS, HONDA

3. Add property named as "PlantListMfg" on IM of **Bajaj_Part_Mfg IM** form
 - User should be able to select a value from pick list and that too limited value from original plantlist

Administrator Has to create a filterlov based on plantlist lov already in the database

And attached it to this property

4. User want a property "**PartType**" to be available on "**Bajaj_Part_Manuf**" level, which is on **IRM** of a **Bajaj_Part_Manuf**
 - **The purpose is to display this property at Item Level, which typically get created while populating item master form**

Administrator: Has to create a compound property on **Bajaj_Part_Manuf**

5. **Update the package template file and deploy**
6. **Very above requirement got satisfied or not?**

=====

Correction required for 4 since compound property is not getting reflected

Reason: "**PartType**" Property is on IM form of **Bajaj_Part_Manuf** and not the IRM form

- Administrator need to edit the property and correct the path here
- Delete the existing compound property and create new
- After doing this change database will be updated and change will be verified

Add More Configurations to Bajaj Site:

1. User want a specific relation named as "DocumentRef" to attached dataset to "**Bajaj_Part_Eng Revision**"
 - Administrator will create a subtype of ImanRelation object named as "DocumentRef"
 - Add few properties on that in case required
 - Add "DocumentRef" as a relation property to "**Bajaj_Part_Eng Revision**"
 - This is must step before using custom relation between objects like "**Bajaj_Part_Eng Revision**" and dataset/any other object
 - This relation can be used for controlling "deep copy" rule as well as GRM rule

2. User wants...

- a. **NoteTypes** : "**Bajaj_Engg_Note**" to be displayed in Structure Manager for product/component occurrence to specify critical information from Engineering Point of View

Administrator: Has to add custom note type

- b. **Status:** User want more specific status (**Allocated, Pre-Released, Canceled, Failed, Evaluation, Released**) to be applied through workflow on data in Teamcenter like ItemRevision/Dataset etc

Administrator: Has to add custom status type

- c. **Unit of Measures:** User want more specific measurement category like (**Cubic Metre, Cubic Foot, KG, INCH, Square Foot, Square MM, Square Metre, Pound (Weight), Foot, Millimetre**)

Administrator: Has to add measurement categories

3. Display Rule→ User wants to display their interested object in creation dialog box (Right info to Right User) based on their role/group

- a. **Bajaj_Part, Bajaj_Part_Engg, Bajaj_Part_Ass** not to be displayed to "LightGroup" group, since this group user will never create a above parts
- b. **Bajaj_Part_Logtc** not to be displayed to Engineering, Manufacturing, LightGroup Group, since it content cost information and also this part should be created by **purchase group** people only
- c. **Bajaj_Part_Logtc** should not be displayed to role "**Purchase Analyst**" under **purchase group**

Administrator: Has to create display rule to control display of object in creation dialog box based on role/group

4. **Deep Copy:** User want to control copy operation while doing revise and “save as” for secondary object attached to Bajaj_Part_Revision, and the same rule are expected to all subtype of Bajaj_Part (Bajaj_Part_Ass , Bajaj_Part_Cust, Bajaj_Part_Eng, Bajaj_Part_Logtc, Bajaj_Part_Manuf, Bajaj_Part_Toolg)

Rule1: When user revise/save as “UGMaster” and “UGPart” dataset should not get copied, which is attached to “Bajaj_Part_Revision” with Relation Iman_specification

Rule2: When user revise/save as “DirectModel” dataset should not get copied, which is attached to “Bajaj_Part_Revision” with relation IMAN_rendering

Rule3: When user revise/save as “ACDDWG” dataset should get copied “as object”, which is attached to “Bajaj_Part_Revision” with relation IMAN_sepcification

Comments: Since AutoCAD integration is not yet installed so above dataset type is not available

Rule4: When user revise/save as “AssemblyForm” form should get copied “as object”, which is attached to “Bajaj_Part_Ass_Revision” with relation IMAN_sepcification

5. **User want to control the relationship between various objects** in the system like Bajaj_Part and Document, Two Item Revision etc

Administrator: has to create a GRM rule for all those control required

Rule1: User should **not be able** to attach **Document** type of Item to **Bajaj_Part_Revision** and all its subtype using any relation

User should **not be able** to attach **Bajaj_Part_Revision** and all its subtype to **Document** using any relation

Rule2: User should **only** be able to attach **Document** to Bajaj_Part_Revision and all its subtype using custom relation “**DocumentRef**”

User should **only be able** to attach **Bajaj_Part** and all its subtype to DocumentRevision using custom relation “**DocumentRef**”

Rule3: User should be able to attach **DocumentRevision** to **Bajaj_Part_Revision** and all its subtype using Iman_Reference, Iman_Specification, Iman_Manifestation, and Iman_Requirement

User should be able to attach **Bajaj_Part_Revision** and all its subtype to **DocumentRevision** using Iman_Reference, Iman_Specification, Iman_Manifestation, and Iman_Requirement

Rule4: User **should not be** able to create more than one **ItemMaster** & **ItemRevisionMaster** form under Bajaj_Part & Bajaj_PartRevision including all its subtype (Bajaj_Part_Ass , Bajaj_Part_Cust, Bajaj_Part_Eng, Bajaj_Part_Logtc, Bajaj_Part_Manuf, Bajaj_Part_Toolg)

Rule5: User should be able to attach UGPART & UGMASTER dataset **only once** to Bajaj_Part_Revision and all its subtype

Rule6: User should **not be able** to attach **more than one** MSWord Dataset to DocumentRevision

Rule7: User should **not be able** to attach any other dataset to DocumentRevision

Rule8: User should not be able to add UGMaster & UGPART to DocumentRevision

Package the template file and verify all above configuration

=====

1. Modification Required: Working correctly but also need DocumentRef relation to be available for Bajaj_PartRevision and all its subtype

– **Administrator has to add** “DocumentRef” relation property to Bajaj_PartRevision so that it will be available to its entire child as required

2. Working correctly

3. Working correctly

4. Deep copy rule is not working as expected config issue

Rule1: Error:

“Exceeding primary cardinality. See rule for: Bajaj_PartRevision, UGMASTER, Specifications
Exceeding primary cardinality. See rule for: , ,”

The above issue is because of wrong primary cardinality set for Bajaj_PartRevision as below which is restricting **deep copy rule to work**

Business Object : Bajaj_PartRevision

Main
Properties
Operations
Deep Copy Rules
GRM Rules
CreateDescriptor

Filter By
☒ Primary
☐ Secondary

Primary
Bajaj_PartRevision

Secondary

Relation

☐ Show Inherited Rules
☐ Show Effective Rule

Primary	Secondary	Relation	Primary Cardin...	Second
Bajaj_PartRevision	Document	Match All	0	0
Bajaj_PartRevision	Document	DocumentRef	-1	-1
Bajaj_PartRevision	DocumentRevision	IMAN_manifestation	-1	-1
Bajaj_PartRevision	Bajaj_PartRevisio...	IMAN_master_form	1	1
Bajaj_PartRevision	DocumentRevision	IMAN_reference	-1	-1
Bajaj_PartRevision	DocumentRevision	IMAN_requirement	-1	-1
Bajaj_PartRevision	DocumentRevision	IMAN_specification	-1	-1
Bajaj_PartRevision	UGPART	IMAN_specification	1	1
Bajaj_PartRevision	UGMASTER	IMAN_specification	1	1

Administrator: Has to edit the GRM rule

Rule 2: Is working correctly

Rule3: Is not verified since no autocad integration is available

5. GRM:

Rule1: Working Correctly

Rule2: Working correctly

Rule3: Working correctly

Rule4: Custom rule Bajaj_Part/Bajaj_PartRevision is not required to achieve the expected behavior, since it get inherited from Item to its all child and from ItemRevision to its all child as below

Item	PCM_object	IMAN_manifestation	-1	-1	Unrestricted	Changeable	Unrestricted	✓
Item	Form	IMAN_master_form	-1	1	WriteAccess...	Frozen	Unrestricted	✓

Primary	Secondary	Relation	Primary Cardin...	Secondary Car...	Attachability	Changeability	Detachable...	Secur...
ItemRevision	UGALTREP	Match All	0	0	WriteAccess...	Changeable	WriteAccess...	✓
ItemRevision	UGMASTER	Match All	0	0	WriteAccess...	Changeable	WriteAccess...	✓
ItemRevision	Participant	HasParticipant	-1	-1	Unrestricted	Changeable	Unrestricted	
ItemRevision	Folder	IMAN_manifestation	0	0	Unrestricted	Changeable	Unrestricted	
ItemRevision	Envelope	IMAN_manifestation	0	0	Unrestricted	Changeable	Unrestricted	
ItemRevision	PSBOMView	IMAN_manifestation	0	0	Unrestricted	Changeable	Unrestricted	
ItemRevision	PSBOMViewRevisi...	IMAN_manifestation	0	0	Unrestricted	Changeable	Unrestricted	
ItemRevision	POM_object	IMAN_manifestation	-1	-1	Unrestricted	Changeable	Unrestricted	
ItemRevision	UGMASTER	IMAN_manifestation	0	0	WriteAccess...	Changeable	WriteAccess...	✓
ItemRevision	Form	IMAN_master_form	-1	1	WriteAccess...	Frozen	Unrestricted	✓
ItemRevision	Folder	IMAN_requirement	0	0	Unrestricted	Changeable	Unrestricted	

Removed below rule created earlier:

Bajaj_PartRevision	Form	IMAN_master_form	-1	1	WriteAccess...	Frozen	WriteAccess...
--------------------	------	------------------	----	---	----------------	--------	----------------

Rule5: Need correction since deep copy is not working because of primary cardinality got set wrongly

Bajaj_PartRevision	UGPART	IMAN_specification	1	1	WriteAccess...	Changeable	WriteAccess...
Bajaj_PartRevision	UGMASTER	IMAN_specification	1	1	WriteAccess...	Changeable	WriteAccess...

This need to be changed to

Bajaj_PartRevision	UGPART	IMAN_specification	-1	1	WriteAccess...	Changeable	WriteAccess...
Bajaj_PartRevision	UGMASTER	IMAN_specification	-1	1	WriteAccess...	Changeable	WriteAccess...

Rule 6: Working correctly

Rule7: Working correctly

Rule8: Working correctly

=====

Add More Configurations to Bajaj Site:

1. Bajaj want to control user access on data stored in Teamcenter

Administrator has to configure the AM rule tree.

Rule1: User having Lightuser role in lightuser group should not be able to see UGPART & UGMaster dataset, since these users are not supposed to view/modify/write this dataset

Rule1. A: - User in lightuser group should have only read access to all items, since these users are not supposed to edit/create the item

Rule1. B: User in light user group should have only read access to all forms, since these users are not supposed to edit/create the form

Rule2: On “assembly form” attached to any item like Bajaj_Part_Engg/Bajaj_Part_Ass, owning group **should not have** edit privileges

Rule3: Revision rule created by user should be visible to him/system administrator, for all other users it should not be visible, reason users want to treat this rule as private

Rule4: For all objects full access required to APLIntegration users excluding delete, this user required to transfer the data from TC to other integrated application

Rule5: If the owning group has security “restricted” data created by this group should not be visible to any other group/user (World) even read only excluding open group to whom it should be read only

- To achieve this group security LOV should be appended
- New ACL to be created

Rule6: If the owning group has security “open” data created by this group should be visible to any other group/user (World) as read only

Rule7: for all dataset, owning group user should have only read access

Verify all above Rules:

Rule1: Is working correctly

Rule1.A: Is working correctly

Rule1.B: Is working correctly

Rule2, 3, 4, 5, 6, 7: Is working correctly

2. Bajaj want to use projects for organizing data and controlling access based on project membership, presently they are thinking of having two projects as below

Project administrator should create the project and define the required access for various members in the project & world

- a. **Pulsor 320 RnD** project data should be restricted to only project member and all other users in the system should not be able to see the data under this project
 - b. Bajaj want to developed a mini car in association with Nissan, this project is highly secured due to competition in the market and need close control on data generated for this project
- Administrator should add/preferences as required for project functionality
- a. ProjectSmartFolder_DefaultChildProperties= project_data
 - b. ProjectSmartFolder_default_relation=project_data

3. Bajaj want to send all their work through one or more business processes to achieve goal.

Administrator has to create various workflows using workflow designer to automate and integrate above business processes

- a. Document Evaluation: User want to get document evaluated by checking various criteria's as below
 - a. Check the document has BVR attached to it
According to business rule/practice document should not have BOM View Revision attached to it, since it is not expected by user to create document BOM in PSE, so workflow need to check this and restrict user to get evaluated document created by him/her when there is a BVR attached to it
 -Administrator has to use blank task template since there is no task template like do/review/condition can directly get solution for this requirement.
 - b. Check for status attached to it

If the document is already having status i.e has gone through other workflow (business process) or the “Document Evaluation” process, the business practice/rule is that user should not be able to send document once again to business process called as “Document Evaluation”

c. Check for valid revision ID

Business practice is user should always use alphabet as revisionID, where in case if user select any other like 1/2/ any combination A1, so in this case document should get evaluated since rev id is wrong

d. Check for valid dataset attached to it

Business practice is user should only attached MSWord and that too with custom relation “DocumentRef”, if user is not following this rule, he/she should not be able to get document evaluated

e. If all above checks get passed then set the status as “Evaluation”

If all above criteria's are satisfied then only document should get status as “Evaluated” which gives clear idea on document is correct as per the business requirement, else user should get notified for all the errors in document found

Administrator has to create workflow process having above task

Workflow is automating business process task as per the requirement

Have verified in all aspect

- b. Similarly other business process requirement need to indentified and automate using workflow

Add more configurations to Bajaj Site:

Bajaj want to classify various type of document/component/resources/process generated for different purpose to take below advantages

1. To categorized product related data based on various criteria's/purpose user is creating.
2. To distinguish particular document/component/resource/process/plant in a group of document/component/resource/process/plant based on the different attribute values.
3. To search the specific document from the group based on attribute defined while grouping the same
4. This will help to increase the re-use of information

Bajaj want to classify document under below categories with having properties like "Document Title", "Keyword", "Creation Date", "Subject"

Communication

Manufacturing

Contract

Technical Documents

Design Definition

Design Change

Failure Analysis

Performance

Stress

Requirement

Generic Requirement

Product Level

Specification

Accessory

Consumables

Validation

Bajaj want to classify component under below categories with properties like "component type", "component family",

Engineering Component

Supplier Component

Purchased Component

Bajaj want to classify Resources under below categories

Component Holding (With properties like "comp description", comp type")

Machine (With properties like "machine description", machine type)

Tools (With properties like "Tool Description", "Tool Type", "Keyword", "Tool Title")

Bajaj want to classify product templates under categories as below

4S Series Product

2S Series Product

3 Wheeler

- Front Engine
- Rear Engine

Administrator has to create classification hierarchy using classification administration application

1. Administrator has to create a hierarchy and add attribute to classes at various level based on the inheritance
2. Since for entire document classification the **“Document Title”, “Keyword”, “Creation Date”, “Subject”** are same so these attribute will be added to abstract top class ie **“GlobalDocument”** so that it will be available to all sub classes for document classification
3. This need to achieved through classification dictionary
4. Administrator task is over since has created hierarchy and have added required attribute there

Similarly Resources and Product Template can be classified here...

Verify: How user use this classification for document and component, say here R/D group designer want to classify component and document similarly other group user can avail this functionality

Imp: All other user will only see “classification application” and not the “class administration” since it’s a admin activity and only DBA user can access this

All classes have verified for component and document classification

Use the classification for...

1. Searching the object based on attribute value for the classified object using extended search

2. Use the component/product template from classification in product structure

3. Use the classified resources to build the resource for new requirement or for change in product

a. Every resource need to be classified

b. Classified resources can be used for building new resources using resource manager

The screenshot shows the 'Resource Manager' application window. On the left, a tree view displays a resource path: '000736/A;1-ffff'. The main area is titled '000736/A-ffff / New Resources'. It contains two tabs: 'Properties' (selected) and 'Viewer'. Under the 'Properties' tab, there is a section 'Attribute values' with two input fields: 'Description M1' and 'Comments M2'. To the right, a 'Classification Information' panel is visible, showing a 'Hierarchy' tree with 'Classification Root' selected.

- ### Administrator has to create ACL under as below

New ACL created and below entries are added

But can classify in other classes so ACL verified for restricting world to create ICO.

2. The “Technical Document” class should be visible to only “RnD” group

Administrator has to create ACL for this requirement and verify

Add more configurations to Bajaj Site For CAD/Teamcenter Integration:

Requirement:

Design Engineer/User who is involved in working on CAD (NX) should be able to populate below attributes on UGPART from CAD on **Bajaj_PartAss Revision Master Form** while saving assembly from NX to TC

1. MaterialGroup (Bajaj_PartAss Master Form)
2. PlantList (Bajaj_PartAss Master Form)
3. PartUOM(Bajaj_PartAss Master Form)

BPA00012/A

Bajaj_Part_AssRevisionMaster

ControlClassification:

PartKeyWord:

MaterialGroup:

MaterialType:

PlantList:

ProdPart:

PartUOM:

Sourcing_Channel:

General

Check-In Save Cancel Check Out Close

Designer want to add these properties while creating model in NX (ugmaster dataset)

Note: All those attribute mapped should be editable from both NX as well as TC

Administrator has to perform below activities

1. Load the NX templates (Model, Assembly, Drawing templates) to use in NX TC integrated while doing modeling, assembly and creating drawing
 - a. Edit the **...templates.pax** file as per the requirement available in %UGII_BASE%\UGII\sample\templates directory

- b. Import the template using below command here
- Launch TC Command prompt
 - Ensure FMS HOME is set correctly and connected
 - Ensure UGII_BASE and UGII_ROOT directory is set

Run the command

```
C:\apps\sample>tcin_template_setup -help

*****

Usage: tcin_template_setup.bat

    -u[ser]=<user> specifies NX Manager user name (required)
    -p[assword] specifies NX Manager password (required)
    -g[roup]=<group> specifies NX Manager group name
    -n[aming]=autotranslate|autogen (default is autotranslate)
    -a[ction]=overwrite|new_revision (default is new_revision)
    -h[elp] prints this message

*****
```

It does offer various option to control naming rule, new_revision etc

If its first time user is loading the template use

```
C:\apps\ugnx6\ugii\templates\sample>tcin_template_setup -u=infodba -p=infodba -g=dba
```

-Ensure the templates get populated in Teamcenter

2. Export the default attribute mapping file from TC

```
C:\TC801_~1\TR\bin>export_attr_mappings.exe -file=tc_cad_int_attribute.xml -u=infodba -p=infodba -g=dba
```

3. Edit the file for mapping above attribute

```
{ Dataset type="UGMASTER"
```

```
    MaterialGroup:  
ItemRevision.GRM(IMAN_master_form,Bajaj_Part_AssRevisionMaster).MaterialGroup  
/master=both /description="MaterialGroup"
```

```
    PlantList:    ItemRevision.GRM(IMAN_master_form,Bajaj_Part_AssRevisionMaster).PlantList  
/master=both /description="PlantList"
```

```
    PartUOM:    ItemRevision.GRM(IMAN_master_form,Bajaj_Part_AssRevisionMaster).PartUOM  
/master=both /description="PartUOM"
```

```
# (hard-wired) DB_DATASET_REV : "Part File Rev"  
# (hard-wired) DB_DATASET_ID : "Part File ID"
```

```
}
```

4. Import the file to TC
C:\TC801_~1\TR\bin>import_attr_mappings.exe -help
(import_attr_mappings.exe) arguments are:

```
-file=<mapping-file>  
[ -test ]  
[ -dryrun ]  
[ -u=<username> ]  
[ -p=<password> ]  
[ -update_file=<export_mapping-file> ]  
[ -g=<group> ]
```

where:

"-test" means "import as test mappings, not as real ones"

```
C:\TC801_~1\TR\bin>import_attr_mappings.exe -file=tc_cad_int_attribute.xml -dryrun -u=infodba -p=infodba -g=dba
```

Hint: Form name can be directly seen in Teamcenter Rich Client

```
C:\TC801_~1\TR\bin>import_attr_mappings.exe -file=tc_cad_int_attribute.xml -u=infodba -p=infodba -g=dba  
Creating new mappings...  
Saving new mappings:  
    Marking old mappings for removal...  
    Saving 4 new mappings...  
Finished saving new mappings.
```

C:\TC801_~1\TR\bin>

- **Verify the attribute mapped from both side**

- a. User has to launch the NX and create a Bajaj_Part_Assembly and while saving can save above attribute from NX
- b. Similarly, if user will change this properties from TC and when will open the part from TC in NX it will be available

Note: For all other CAD (CATIA/PROE/AUTOCAD etc), attribute can be mapped using this method

Dataset for respective CAD for managing data in Teamcenter will be available after integrating the CAD with TC.

Bajaj Site Configuration:

1. Add **BJ4MakeBuy** property on **Bajaj_Part_AssRevision**, this property should be displayed in PSE/SM and must be editable

Purpose: This property value will be populated while creating assembly/product in SM

Administrator has to...

- a) Define **BJ4MakeBuy** on Bajaj_Part_AssRevision
 - b) Attach required LOV to it
 - c) Add this property as compound property to BOMLine business object so that it will be available there as a column
 - d) Add **bl_rev_BJ4MakeBuy** property for this compound property to be displayed in SM
2. Add property named as **MaterialGroup** from **Bajaj_Part_AssRevision Master Form** which should be displayed in BOM View and user must be able to edit the value here

Purpose: This property value will be populated while creating business object named as "Bajaj_Part_Ass"

Administrator has to...

- e) Define **MaterialGroup** on Bajaj_Part_AssRevision (In This case its already defined)
- f) Add this property as compound property to BOMLine business object so that it will be available there as a column
- g) Add **bl_rev_MaterialGroup** property for this compound property to be displayed in SM

Deploy the template...

Verify the same in Rich Client:

1. Launch structure manager
2. Add the required columns
3. Verify the properties values there
